

Minutes 3/26/14

Servos connected mechanically, can't turn up and down. Haven't tried turning them electrically

Jack's voice is missing

Have the pi cam working through python on the pi.

Using motion, and loading the pics? Probably too slow

Using a library called picamera, not sure if opencv can use it

Using openCV 3.0 on pi board. Not sure if possible.

Servers: talked to Yaakov

Mysquill, not modern enough

Setting up an old tower computer to use as a server, using node.js, can forward videos to site, requiring authentication (javascript replacement for psp)

All data on pi sent to server using restful webservice

mongoDB for database, not as rigid, can send documents, more flexible

ditch android app, use jquery mobile website, so any mobile phone can access it

at what point do we order our other pi boards?

Need authentication for controlling of servos
