

4/9/14

## Meeting Minutes

Video processing updates – need to get just one contour, not a bunch of contours. Could do this by speed, minimum box size. Issue is detecting the car-big issue.

Cloning SD cards work, so we have multiple Pi boards. Demo discussion- live demo on the day of tracking people into and out of Stinson Remick, as well as a video of live working in a parking garage, one at the booth and 3 at the doors. We can probably get 2 more Pi's working.

Servo blaster Jack is looking into this, program and board tolerances look good

Web server info – node.js and mongo.db are installed. Demonstration Day need a poster presentation, session is 1-5, faculty wanders around with evaluation sheets, evaluate each group. Engineering graphics can make us a board for poster presentation.
