

Notes

“It is gonna be fun to solder it all, partner” - Pitz

Server Set-up:

For the server, we have to show we can do a LoRa transmission and we can print to the server. We do not have to properly integrate the two systems yet for Design Review 2 (so we do not need to show we can print LoRa info to the server).

Board Design:

There should not be an issue with stacking the LoRa, ESP32, and the Battery (no problem with ground plate).
