

Agenda for Meeting #9

3/21/22

-
1. Update on project progress / Question (25 minutes)
 - a. We cannot wire the battery through from the outside. We will need to place the battery on the inside. Thus we will need to use a high-temperature capability battery
 - b. We are currently investigating whether a magnet would work instead of adhesive, but we are leaning towards high temperature adhesive with velcro
 - c. Ask about when parts arrive
 - d. Ask about how we could recharge LiPo batteries externally
 2. Issues with board possibly caused by magnet? (5 minutes)
