Final Meeting Notes with Professor Schafer 04/29

PCB Issues
- I/O 46, internal pull up on pin could replace external pull up.
- Might have to GND floating Pins on I/O
- Could connect wire straight from 3.3V and GND to ESP

Motion
- Works. Just have to monitor rotation angles depending on final weight

AI
- Works great.
- For Demo, have easy to understand phrases. Do not want to be misheard.

Battery
- Potentially could connect smaller wire to thicker wire to better fit the crimper.
- Schafer might have free hanging connector to attach to
